Production Er. - E-Learning Applications,
Udaipur, Rajasthan
Apr. 2012 - Nov. 2013

Projects

Micro Energy Credits August 2021 – October 2021

(Large Data Processing Web Application)

- Technology: Python Django, React for frontend, Postgres as database
- The application deals in green products (with less carbon combustion) and gets the data from various financial institutes and processes and corrects them to submit a clean report to the UN. This is the current project being worked on.
- I was responsible for getting requirements from the client and assigning tasks to the team.
- I was also involved in creating the architecture of the project and developing the front end of the application using React.

Monica+Andy 2020–2021

(Online Clothing Store for Infants)

Details: Technology: Python Django, React for frontend, Postgres as database

- The application is a venture from an already established online store in the US that deals in baby clothes and items. The app helps the expecting parents to create a list of handpicked items (gifts) for their baby and share the registry with their friends and family. The platform not only provides them with recommendations from their own store but also from third-party stores. The platform is smart enough to recommend the products based on customer preference.
- My role as a Team Lead was to collect the requirements and take technical decisions to implement them effectively using the Agile methodology.
- I was also involved in developing the front-end using React as a major technology to accomplish the requirements.

IDHub 2020–2021

(Identity Management Application)

Details: Technology: Angular, MaterialUi, Java (APIs provided by offshore team)

- IDHub is a platform for requesting and approving requests regarding access to a particular application or the hardware in a company. The admin can add the applications to the database.
- My role as a tech lead was to implement scrum effectively and establish proactive communication with the client to get the in-depth requirements.
- I was also involved in mentoring the team on various technologies that were being used in the project.

Other Projects include Amobee (Turn), Jellyfish Training, Ockto, and KPMG Training Application on the technologies like React, Angular, Vue, jQuery, Django, PHP, and WordPress.
